PROFESSIONAL SUMMARY

Bachelor of Computer Applications graduate with hands-on experience building, securing, automating, and monitoring cloud infrastructure across AWS and Microsoft Azure. Skilled in Terraform, Jenkins, GitHub Actions, Docker, Kubernetes, Amazon EKS, Linux, cloud networking, security, and observability. Built an 11-stage DevSecOps CI/CD pipeline, a secure multi-VPC AWS architecture, and an Azure Hub-Spoke network with centralized monitoring. Seeking an entry-level Cloud or DevOps Engineer role focused on Infrastructure as Code, CI/CD, containerization, cloud security, networking, and monitoring.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure

AWS: EC2, VPC, Elastic Load Balancing, Auto Scaling, EKS, ECR, Amazon RDS for MySQL, S3, IAM, CloudFront, AWS WAF, Transit Gateway, VPC Endpoints, Systems Manager, CloudWatch, SNS

Microsoft Azure: Virtual Machines, Virtual Network, VNet Peering, Network Security Groups, Application Security Groups, User-Defined Routes, Azure Load Balancer, Application Gateway, Traffic Manager, Front Door, App Service, Azure SQL, Azure Monitor, Log Analytics

DevOps & CI/CD: Git, GitHub, GitHub Actions, Jenkins, CI/CD Pipelines, Docker, Kubernetes, Terraform

Kubernetes: Amazon EKS, Deployments, Services, ConfigMaps, Secrets, Ingress, HPA, Namespaces, Helm

Networking & Security: Subnetting, Route Tables, Security Groups, NACLs, NSGs, IAM, WAF, CloudTrail, VPC Flow Logs, Trivy, Sonar Qube

Monitoring & Observability: Prometheus, Grafana, Amazon CloudWatch, CloudWatch Alarms, SNS, Azure Monitor, Log Analytics

OS & Scripting: Linux, Ubuntu, Windows, Bash, Python, PowerShell

Web Servers & Databases: Nginx, Apache Tomcat, MySQL

Troubleshooting: SSH, curl, ping, telnet, log analysis

PROJECT EXPERIENCE

End-to-End DevSecOps CI/CD Pipeline on AWS EKS and Azure AKS | September 2026

Tech: Jenkins, GitHub, SonarQube, Docker, Trivy, Docker Hub, Amazon EKS, Azure AKS, Kubernetes, Prometheus, Grafana, Alertmanager | github.com/ambatimokesh/CI-CD

- Built an 11-stage Jenkins pipeline for code checkout, dependency installation, application validation, SonarQube analysis, Trivy filesystem and image scans, Docker image build and push, and Kubernetes deployment; enforced a passing SonarQube Quality Gate before deployment.
- Provisioned Amazon EKS with two worker nodes and an Azure AKS cluster; deployed the application to both and verified workload readiness and application access. Validated 11–13 running Pods on EKS.
- Created Deployments, Services, ConfigMaps, Secrets, Ingress, and Horizontal Pod Autoscalers; tested rolling updates, scaling, and service exposure.
- Integrated Prometheus, Grafana, and Alertmanager; configured three alert rules with email notifications.

Secure and Highly Available Multi-VPC Web Application Architecture on AWS | August 2026

AWS VPC, Transit Gateway, Application Load Balancer, EC2, Auto Scaling, Amazon RDS for MySQL, CloudFront, AWS WAF, IAM, AWS Systems Manager, VPC Endpoints, CloudWatch, SNS |

github.com/ambatimokesh/aws-multi-vpc-ha-failover-architecture

- Designed a highly available architecture across three VPCs and two Availability Zones, using AWS Transit Gateway to connect segmented application, development, and database environments.
- Deployed an EC2 Auto Scaling group behind an Application Load Balancer (minimum 2, desired 2, maximum 4); validated health checks, scaling, and automatic instance replacement.
- Deployed Multi-AZ Amazon RDS for MySQL in private subnets, restricting database access with Security Groups; secured the environment with AWS WAF, NACLs, least-privilege IAM, Systems Manager Session Manager, and VPC endpoints.
- Integrated CloudFront for content delivery and CloudWatch with SNS for monitoring and email alerts; simulated an EC2 failure and verified traffic distribution and automatic recovery.

Azure Hub-Spoke Network Architecture with Security and Monitoring | June 2026

Azure VNet, VNet Peering, NSG, UDR, Application Gateway, Azure Monitor, Log Analytics Workspace, Azure Managed Grafana | github.com/ambatimokesh/HUB-SPOKE

- Designed a three-VNet Azure Hub-Spoke architecture with one centralized Hub VNet, two isolated Spoke VNets, VNet Peering, and controlled routing.
- Deployed two Ubuntu VMs and implemented NSGs, user-defined routes, and least-privilege access controls to secure administrative and east-west traffic.
- Centralized monitoring with Azure Monitor and Log Analytics; configured alerts, diagnostic logs, and Azure Managed Grafana dashboards for visibility and troubleshooting.
- Validated application traffic across web, application, and database tiers using Nginx, Apache Tomcat, MySQL, Application Gateway, and internal load balancing, including health-probe and failover testing.

CERTIFICATIONS

- Introduction to Cloud Computing — IBM, Coursera
- Introduction to Networking and Storage — IBM, Coursera
- Cloud Virtualization, Containers and APIs — Duke University, Coursera

EDUCATION

Bachelor of Computer Applications — Mohan Babu University, Tirupati	CGPA: 8.5 2025
Intermediate (BiPC) — Sri Chaitanya Junior College, Kurnool	CGPA: 7.95 2020
Secondary School Certificate — Sri Chaitanya E.M. School, Nandyala	CGPA: 8.8 2018
