PROFESSIONAL SUMMARY

Bachelor of Computer Applications graduate with hands-on experience building, securing, automating, and monitoring cloud infrastructure across AWS and Microsoft Azure. Skilled in Terraform, Jenkins, GitHub Actions, Docker, Kubernetes, Amazon EKS, Linux, cloud networking, security, and observability. Built an 11-stage DevSecOps CI/CD pipeline, a secure multi-VPC AWS architecture, and an Azure Hub-Spoke network with centralized monitoring. Seeking an entry-level Cloud or DevOps Engineer role focused on Infrastructure as Code, CI/CD, containerization, cloud security, networking, and monitoring.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure

AWS: EC2, VPC, Elastic Load Balancing, Auto Scaling, EKS, ECR, Amazon RDS for MySQL, S3, IAM, CloudFront, AWS WAF, Transit Gateway, VPC Endpoints, Systems Manager, CloudWatch, SNS

Microsoft Azure: Virtual Machines, Virtual Network, VNet Peering, Network Security Groups, Application Security Groups, User-Defined Routes, Azure Load Balancer, Application Gateway, Traffic Manager, Front Door, App Service, Azure SQL, Azure Monitor, Log Analytics

Infrastructure as Code: Terraform, providers, variables, outputs, data sources, modules, remote state, lifecycle rules, resource dependencies

CI/CD and Version Control: Jenkins, GitHub Actions, Git, GitHub, CI/CD pipelines

Containers and Orchestration: Docker, Kubernetes, Amazon EKS, Helm, Deployments, Services, ConfigMaps, Secrets, Ingress, HPA, RBAC, Namespaces

DevSecOps and Security: SonarQube, Trivy, IAM, Security Groups, NACLs, Azure NSGs, SSL/TLS, vulnerability scanning, least-privilege access, network segmentation

Monitoring and Observability: Amazon CloudWatch, SNS, Azure Monitor, Log Analytics, Prometheus, Grafana, Azure Managed Grafana, Alertmanager

Operating Systems and Scripting: Linux, Ubuntu, Windows, Bash, PowerShell, Python fundamentals

Web and Database Technologies: Nginx, Gunicorn, Flask, Apache Tomcat, MySQL

Networking and Troubleshooting: TCP/IP, subnetting, routing, DNS, HTTP/HTTPS, SSH, curl, ping, telnet, port testing, log analysis

PROJECT EXPERIENCE

End-to-End DevSecOps CI/CD Pipeline on AWS EKS | September 2026

Jenkins, GitHub, SonarQube, Docker, Trivy, Docker Hub, Amazon EKS, Kubernetes, Prometheus, Grafana, Alertmanager |

github.com/ambatimokesh/CI-CD

- Built and validated an 11-stage Jenkins CI/CD pipeline covering source-code checkout, dependency installation, application validation, SonarQube analysis, security scanning, Docker image creation and publishing, and Kubernetes deployment.
- Passed the SonarQube Quality Gate and completed Trivy filesystem and Docker image vulnerability scans before deployment.
- Built and pushed a Docker application image to a container registry through the automated Jenkins pipeline.
- Provisioned an Amazon EKS cluster with two worker nodes, validated 11–13 running Pods, and verified workload health, readiness, and application accessibility.
- Implemented six Kubernetes resource types: Deployment, Service, ConfigMap, Secret, Ingress, and Horizontal Pod Autoscaler.
- Tested rolling updates, rollout verification, workload scaling, service exposure, and application availability.
- Integrated Prometheus, Grafana, and Alertmanager for metrics collection, monitoring, and visualization; configured three alert rules with email notifications.

Secure and Highly Available Multi-VPC Web Application Architecture on AWS | August 2026

AWS VPC, Transit Gateway, Application Load Balancer, EC2, Auto Scaling, Amazon RDS for MySQL, CloudFront, AWS WAF, IAM, AWS Systems Manager, VPC Endpoints, CloudWatch, SNS | github.com/ambatimokesh/aws-multi-vpc-ha-failover-architecture

- Designed a secure and highly available AWS architecture spanning three VPCs and two Availability Zones, with segmented application, development, and database environments connected through AWS Transit Gateway.
- Deployed an EC2 Auto Scaling group with minimum and desired capacities of two and a maximum capacity of four behind an Application Load Balancer; validated health checks, workload scaling, and automatic instance replacement.
- Implemented a private Multi-AZ Amazon RDS for MySQL deployment and restricted database connectivity to the application tier through Security Group rules.
- Strengthened infrastructure security using AWS WAF, Security Groups, NACLs, least-privilege IAM policies, Systems Manager Session Manager, and VPC endpoints for private access to AWS services.
- Integrated CloudFront, CloudWatch, and SNS for content delivery, monitoring, alerting, and email notifications; simulated EC2 failure and confirmed continued traffic distribution and automatic recovery.

Azure Hub-Spoke Network Architecture with Security and Monitoring | June 2026

Azure VNet, VNet Peering, NSG, UDR, Application Gateway, Azure Monitor, Log Analytics Workspace, Azure Managed Grafana | github.com/ambatimokesh/HUB-SPOKE

- Designed a three-VNet Azure Hub-Spoke architecture with one centralized Hub VNet, two isolated Spoke VNets, VNet Peering, and controlled routing.
- Deployed two Ubuntu VMs and implemented NSGs, user-defined routes, and least-privilege access controls to secure administrative and east-west traffic.
- Centralized monitoring with Azure Monitor and Log Analytics; configured alerts, diagnostic logs, and Azure Managed Grafana dashboards for visibility and troubleshooting.
- Validated application traffic across web, application, and database tiers using Nginx, Apache Tomcat, MySQL, Application Gateway, and internal load balancing, including health-probe and failover testing.

Travel Eazy Application Deployment and CI/CD on Microsoft Azure | May 2025

Azure VM, GitHub Actions, Python, Flask, Nginx, Unicorn, SSL/TLS, Azure Monitor, Log Analytics | github.com/ambatimokesh/traveleazy

- Deployed a Python Flask application on an Azure Ubuntu VM using Unicorn as the application server and Nginx as a reverse proxy; secured application traffic with HTTPS using SSL/TLS.
- Automated application deployment through GitHub Actions and protected credentials using environment-based configuration outside the source code.
- Configured Azure VNet and NSG access controls, integrated Azure Monitor and Log Analytics, and troubleshot Linux logs, routes, ports, DNS, SSH, and application connectivity.

CERTIFICATIONS

- Introduction to Cloud Computing — IBM, Coursera
- Introduction to Networking and Storage — IBM, Coursera
- Cloud Virtualization, Containers and APIs — Duke University, Coursera

EDUCATION

Bachelor of Computer Applications — Mohan Babu University, Tirupati CGPA: 8.5	2025
Intermediate (BiPC) — Sri Chaitanya Junior College, Kurnool CGPA: 7.95	2020
Secondary School Certificate — Sri Chaitanya E.M. School, Nandyala CGPA: 8.8	2018
